

UI DEV CHALLENGE

Instructions

We are tasking you to create a non-functional responsive page out of the attached image `ui-test_layout_v01.png`

Feel free to use any of the other attached assets, such as typefaces, images, and icons.

We would like to encourage you to use HTML and style rules as much as possible. You are free to use whatever tool you need.

Please enclose a short letter documenting your process.

Rules

- All the resources should be included inside the project, avoiding using external assets from other servers or using CDN. This is especially important for our projects.
- Use SCSS, which we use in most of our projects.
- Avoid CSS frameworks or library usage (like Bootstrap, Foundation, or similar). So we can know your HTML/CSS skills.

Criteria

We will be looking closely at:

- Results: It should match the reference as closely as possible.
- Responsiveness: We are not providing the tablet or desktop version of the layout on purpose. We would like to see how you would handle the layout on bigger screens.
- Etiquette: Legibility, commenting, naming conventions, and other indicators that you think of others when programming.
- Solutions: There are many different ways to solve any problem and we would like to see how you would.

GOOD LUCK!
